

SAINT MARY OF THE LAKE ORGAN

Information

Records of the initial installation of the pipe organ at Saint Mary of the Lake are not available. However, in the early 2000's a partial restoration of the instrument was completed by Berghaus Pipe Organ Builders. The organ was originally built by the Geo. Kilgen & Son Inc. During the partial restoration a second console was added to the sanctuary of the church, both the choir loft console and sanctuary console are fully functional. The organ has electro-pneumatic sliders, multiple levels of memory, three manuals, and a full pedal board.

Stop Listing
